

i-TAG

A new way of thinking in asset monitoring: Long-life battery powered GPS tracking with in-built RFID asset management.

The **i-tag** is ideally suited for organisations that want to track the location of assets that have no power source.

Light and compact, this battery operated tracking device is designed for companies who want to track high value non-powered items, and is ideally suited for those that only need to know an item's location once a day rather than minute-by-minute.

RFID-based asset management built-in

Each **i-tag** comes fitted with an internal RFID tag so now you can manage your assets as well as track their locations. You can activate asset management from day one, or as your needs evolve, allowing you to future-proof your investment.

The **i-tag** is ideal for monitoring non-powered items, including:

- Plant
- Trailers
- Portable cabins
- Generators
- Cherry pickers
- Cranes
- Rolling stock
- Diggers
- Large mechanical or electrical tools

Why should I choose the **i-tag** for my asset tracking?

- Small (15cm x 6cm x 2cm), light and discreet with no lights or tracking logo to attract unwanted attention
- Long battery life - average of 3 years
- No installation or maintenance charges: "do it yourself" installation and battery changes
- Combine battery changes with general inspections/maintenance checks
- 100% Web based mapping, location and reporting - available from any computer connected to the Internet
- No special software required and unlimited users*

* Refers to GPS tracking only
